

REPORTING

SMART FACTORY

EFFICIENCY IMPROVEMENT FOR MAXIMUM PERFORMANCE

The real-time reporting module provides production data in a structured format and transforms raw data into clearly interpretable KPIs and analyses. This enables informed, efficiency-driven decision-making at all levels of manufacturing.

HIGHLIGHTS:

- Live dashboards – real-time overview of machine runtimes, production trends, and performance deviations
- Seamlessly digital tracking of every production lot across all machines
- Targeted optimization through bottleneck detection
- Efficiency improvement through analysis of cycle and setup times
- Complete part tracking and quality assurance through full traceability
- Alert system for quality deviations before they become problematic

HIGHLIGHTS
